COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

COTTON PRODUCTION IN SOUTH CAROLINA, 1928-1937

- By Counties -

Principal changes in cotton growing in South Carolina during the 10-year period 1928-37 have been the shift to a smaller acreage and an increased yield per acre. The average area in cotton during the last half of the period was 480,000 acres less than during the first half while the yield per acre was higher by 53 pounds.

Acreage reduction resulted from the large crops and low prices of the early 1930's and was effected through farmer cooperation with the Agricultural Adjustment Administration. Planted acreage ranged from a maximum of 2,136,000 acres in 1928 to 1,299,000 in 1934 — a reduction of 39 percent. Approximately 424,000 acres were removed in 1933, the first year of acreage control.

Due mostly to wet weather and weevil damage the years 1928, 1929 and 1932 were unfavorable for cotton, particularly outside the Piedmont section. But during the 5 years 1933-37 weather was more favorable, cotton was restricted to better lands, and more attention was devoted to improving soil fertility, with resultant higher per acre yields.

The comeback of the low country in yield per acre was a feature of the period. Damage from weather and weevil was unusually heavy in this section (districts 3, 5, and 8 on the accompanying map) during the latter part of the decade ended in 1930, with resultant poor yields. Factors affecting cotton yields, however, were much more favorable during the years 1933-1937 and the average yield per acre was 83 pounds higher than during the first half of the 10-year period.

Pickens County led in both individual and average yield with 467 pounds lint in 1937 and the average of 293 pounds for the 10-year period. Greenville was second in average yield with 286 and Dillon third with 284 pounds. The Piedmont counties, headed by Greenville, Pickens, and Spartanburg, were first in yield for the years 1928-32; but the Pee Dee section, headed by Dillon, Marlboro, and Marion led for the years 1933-37.

Estimates for the years 1929 and 1934 are based almost entirely on Census enumeration for those years. Estimates for other years of the period are based on information supplied by crop reporters, available data from the Agricultural Adjustment Administration, and U. S. Bureau of the Census ginnings with adjustments for cross-county movement of seed cotton.

Production is given in 500-pound equivalent gross weight bales. Crops have ranged in size from 678,000 bales in 1934 to 1,023,000 bales in 1937.

Frank O. Black,
Agricultural Statistician.
